1. Overview

The Magexweb **Advance Blog** extension adds a complete, SEO-friendly blog to your Magento 2 store. Write articles with the familiar Magento editor or Page Builder, organise them with categories, authors and tags, let customers comment, and link articles to products so that your content helps you sell.

Content marketing brings visitors from search engines and social media, answers your customers' questions and builds trust in your brand. Advance Blog keeps that content inside your store, next to your products, so readers are always one click away from buying.

> ⚠ ***Important: Blog pages are cached by Magento's full page cache. After you change the configuration, flush the cache in System > Cache Management so the storefront shows the new settings. Scheduled posts are published by Magento cron, so make sure cron is running.***

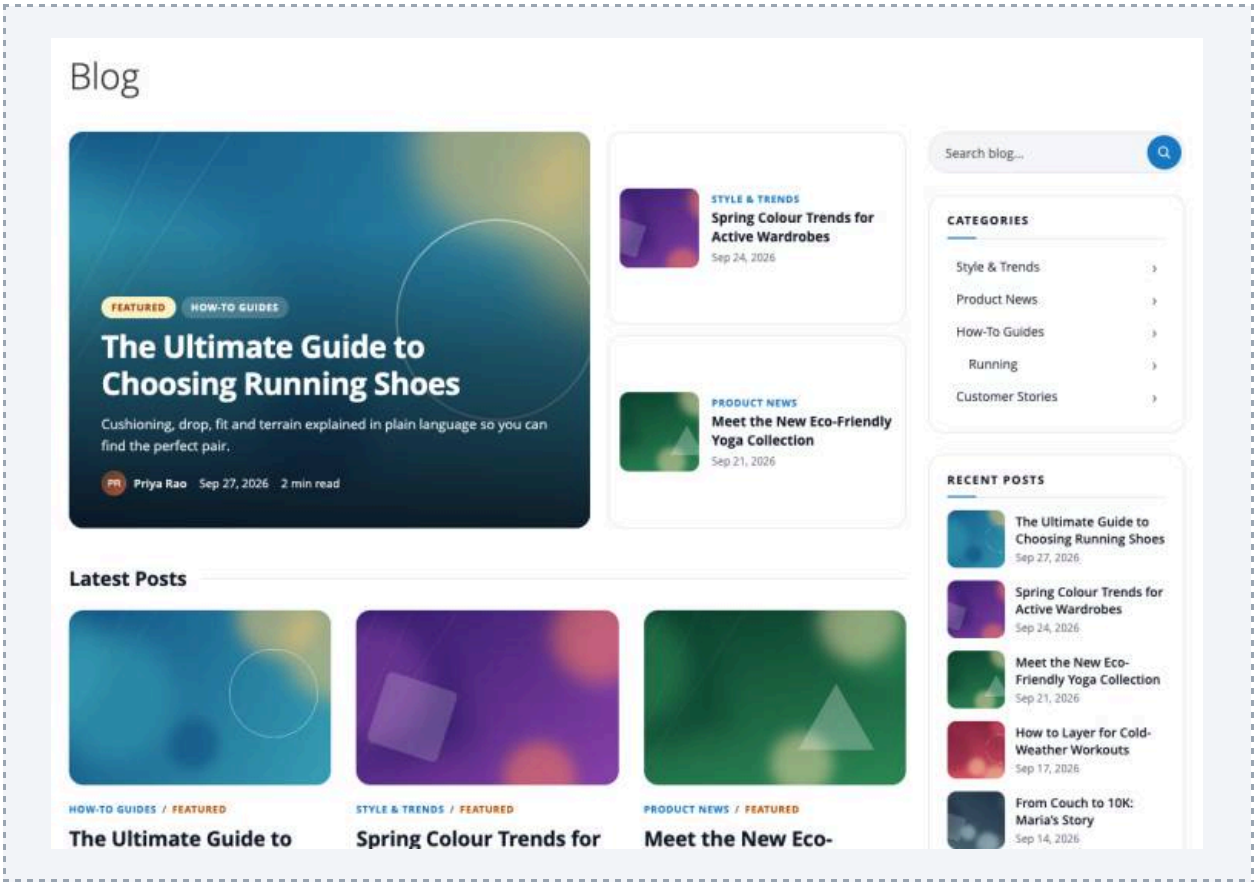

1.1 Key Features

- Posts with featured image, WYSIWYG or Page Builder content, short description, scheduled publishing and a Featured flag
- Nested categories with banner image, author profiles (photo, biography, social links) and tags
- Assign every post, category, author and tag to all store views or to specific store views
- Three listing layouts (Grid, List, Magazine) and three grid post box designs (Classic Card, Image Overlay, Minimal Editorial)
- Featured posts hero on the blog home, popular posts based on real views, related posts and related products
- Table of contents, reading time, reading progress bar, social sharing buttons and previous / next post links
- Threaded comments with unlimited reply levels, moderation, guest comments, email notifications and spam protection (honeypot, rate limit, Google reCAPTCHA)
- SEO-friendly URLs with optional suffix and automatic 301 redirects when a URL changes
- Meta tags, canonical URLs, Open Graph and Twitter / X cards, JSON-LD structured data, XML sitemap and RSS feed
- 8 CMS widgets and a Page Builder "Blog Posts" element
- Related articles on product pages
- Admin dashboard, sample data and a REST API
- Full page cache and Varnish compatible; Magento Open Source and Adobe Commerce compatible

1.2 How It Works

Once installed, the blog is available at **https://your-store.com/blog** and a **Blog** link is added to the top menu. Customers can:

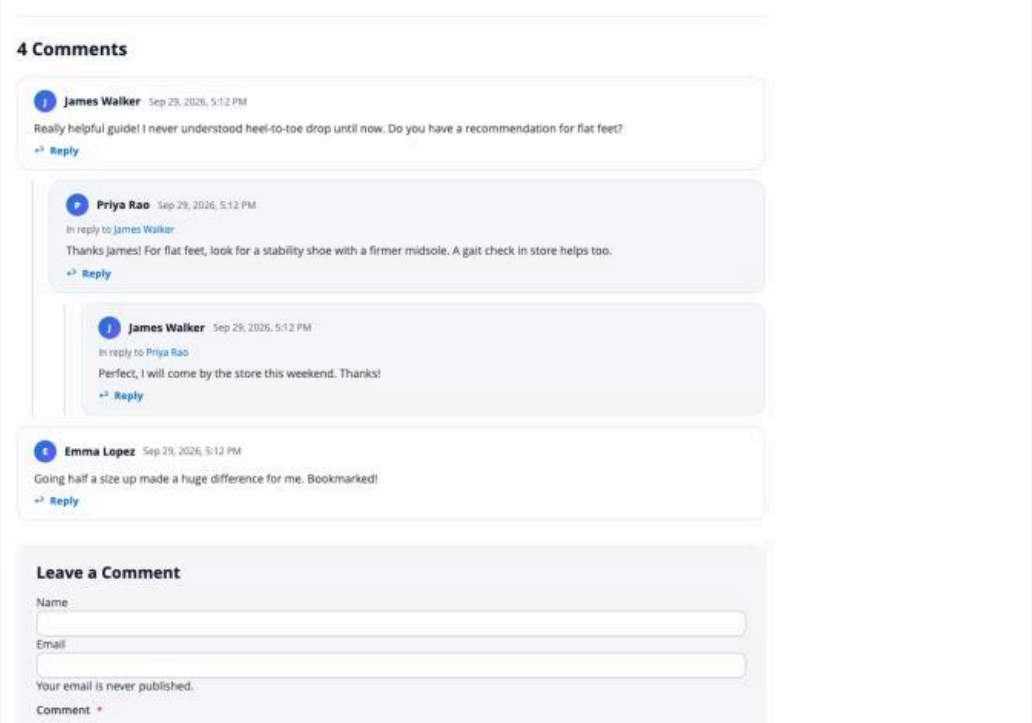

- Browse the latest posts on the **blog home**, with the featured posts at the top and a sidebar with search, categories, recent posts and tags.

- Read a **post**, with its categories, author, reading time, featured image and table of contents.

- Share the post, discover the author and related products, and join the **conversation** in the comments, where replies appear under the comment they answer.

2. Installation

2.1 Composer Installation (Recommended)

1. Place the extension in your project (via the Adobe Commerce Marketplace, a private Composer repository, or by copying it under app/code).

2. From the Magento root, run the following commands:

Command	Purpose
composer require magexweb/advanceblog	Only if distributed via a Composer repository (Marketplace)
php bin/magento module:enable Magexweb_Advanceblog	Registers and enables the module
php bin/magento setup:upgrade	Creates the blog tables and the blog URL rewrites
php bin/magento setup:di:compile	Recommended for production mode
php bin/magento setup:static-content:deploy -f	Required in production mode
php bin/magento cache:flush	Clears the Magento cache

2.2 Manual (ZIP) Installation

- Extract the ZIP package to **app/code/Magexweb/Advanceblog** in your Magento installation, so that app/code/Magexweb/Advanceblog/registration.php exists
- Run the same bin/magento commands listed in section 2.1 (module:enable, setup:upgrade, di:compile, static-content:deploy, cache:flush)
- Verify the module is active: php bin/magento module:status Magexweb_Advanceblog

2.3 Sample Data

Install the sample data to see the blog in action straight away: 9 posts with images, 5 categories, 3 authors, 7 tags and a comment conversation. If your catalog has products, each post is linked to some of them.

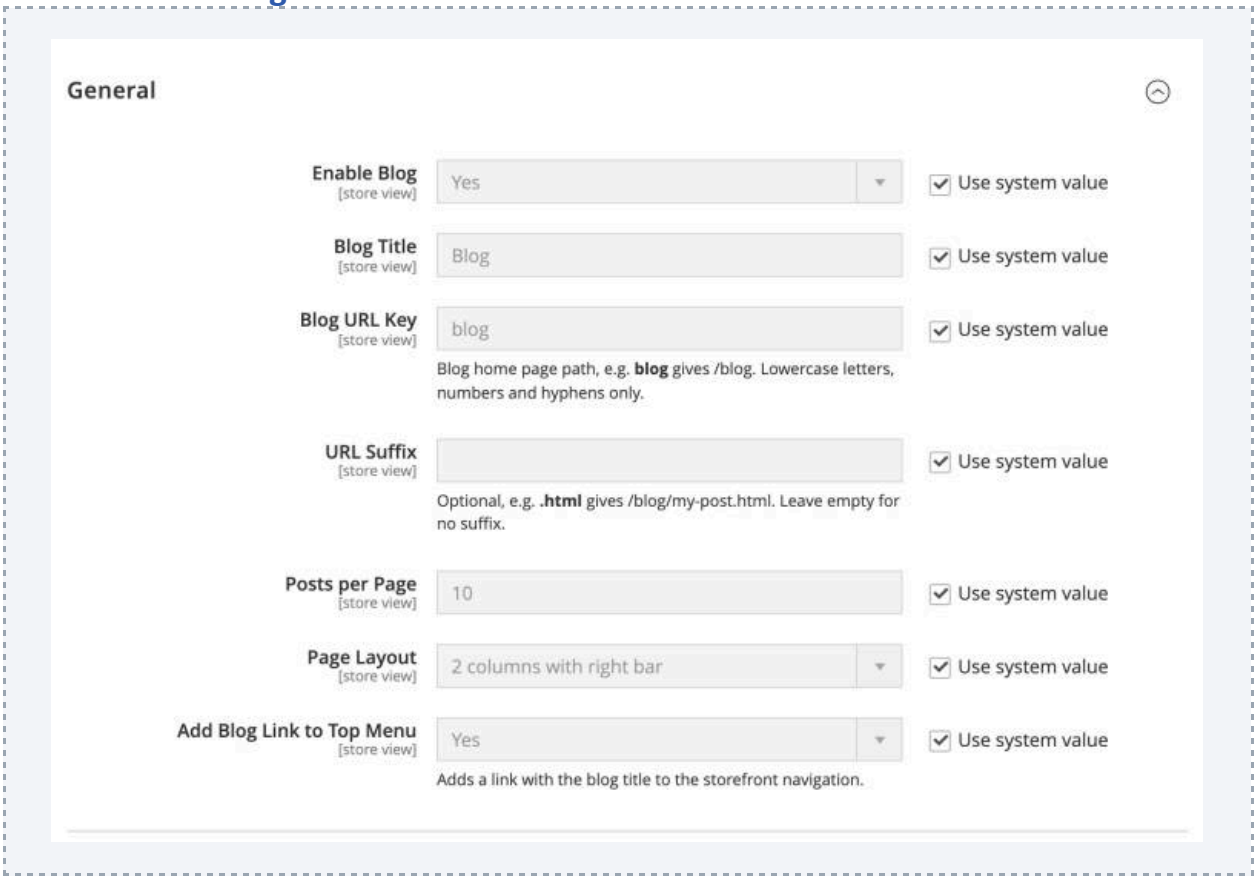

Command	Purpose
php bin/magento magexweb:advanceblog:sample-data:install	Installs the sample posts, categories, authors, tags, comments and images
php bin/magento magexweb:advanceblog:sample-data:remove	Removes exactly what was installed (your own content is never touched)

> ⚠ ***Note: If a URL key of the sample data is already used in your store, the sample item gets a numbered URL key (for example running-2) instead of replacing your content.***

3. Admin Configuration Guide

All settings live under **Stores > Settings > Configuration > Magexweb Extensions > Advance Blog**. Use the Scope switcher at the top of the page to use different settings for a website or store view.

3.1 General Configuration

Field	Description
Enable Blog	Master switch. Set to **Yes** to show the blog on your storefront, or **No** to hide the blog pages and links for this store view. Default: Yes
Blog Title	Name of the blog. Used as the blog home heading, in breadcrumbs, the top menu link, page titles and the RSS feed. Default: Blog
Blog URL Key	Blog home page path, e.g. blog gives /blog. Lowercase letters, numbers and hyphens only. Default: blog
URL Suffix	Optional, e.g. .html gives /blog/my-post.html. Leave empty for no suffix. Default: (empty)

Field	Description
Posts per Page	Number of posts on each page of the blog home, category, author, tag and search pages. Further posts are split into pages. Default: 10
Page Layout	Page layout of all blog pages. Choose a layout with a sidebar to show the blog sidebar (search, categories, recent posts, tags). Default: 2 columns with right bar
Add Blog Link to Top Menu	Adds a link with the blog title to the storefront navigation. Default: Yes

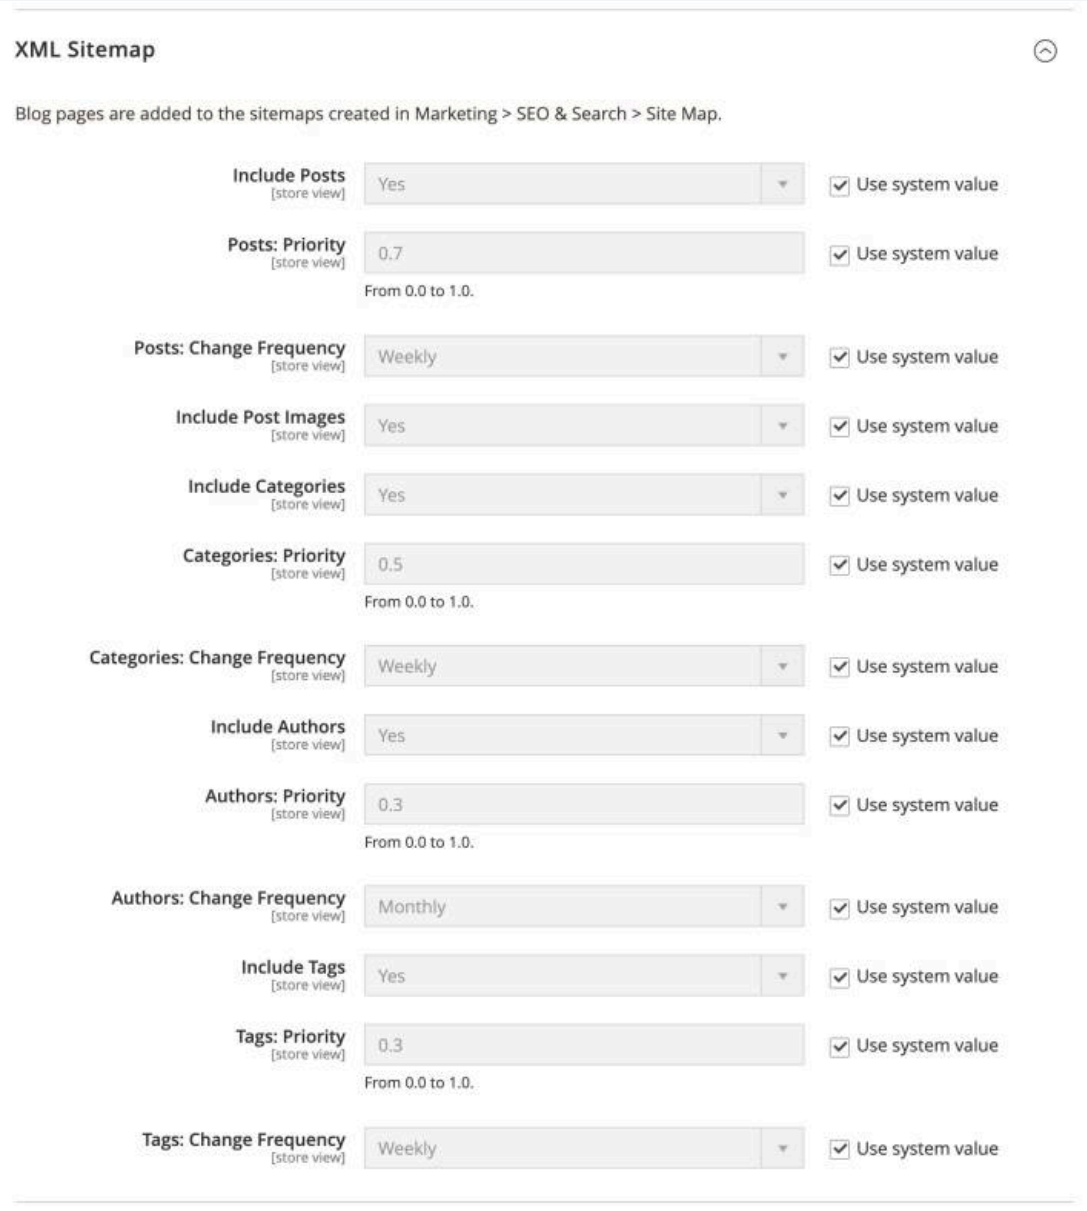

3.2 SEO

Field	Description
Create Permanent Redirect for Old URLs	When a URL key or the blog URL key changes, old URLs redirect (301) to the new ones. Default: Yes
Default Meta Robots	Used by posts, categories, authors and tags that do not set their own value. Default: INDEX, FOLLOW

Field	Description
Blog Home Meta Title	Leave empty to use the blog title. Default: (empty)
Blog Home Meta Description	Meta description of the blog home page, shown by search engines under the page title. Default: (empty)
Blog Home Meta Keywords	Meta keywords of the blog home page (optional; most search engines ignore them). Default: (empty)
Use Canonical Link Tag	Adds to blog pages (a post or category can set its own canonical URL). Default: Yes
Add Open Graph Tags	Title, description and image used when a page is shared on Facebook, LinkedIn, etc. Default: Yes
Add Twitter / X Card Tags	Adds Twitter / X card tags so shared links show a large preview with the title, description and featured image. Default: Yes
Twitter / X Account	For example @yourstore. Default: (empty)
Structured Data: BlogPosting	Disable a structured data type when your theme or another extension already outputs it. Default: Yes
Structured Data: BreadcrumbList	Adds breadcrumb structured data (JSON-LD) so search engines can show the page path in results. Default: Yes
Structured Data: Person (author pages)	Adds Person structured data on author pages (name, image, biography and social profiles). Default: Yes
Structured Data: Blog (blog home)	Adds Blog structured data on the blog home page. Default: Yes
Publisher Name	Organization shown as publisher of posts. Leave empty to use the store name. Default: (empty)
Publisher Logo	Allowed file types: jpg, jpeg, gif, png, webp. Leave empty to use the store header logo. Default: (empty)

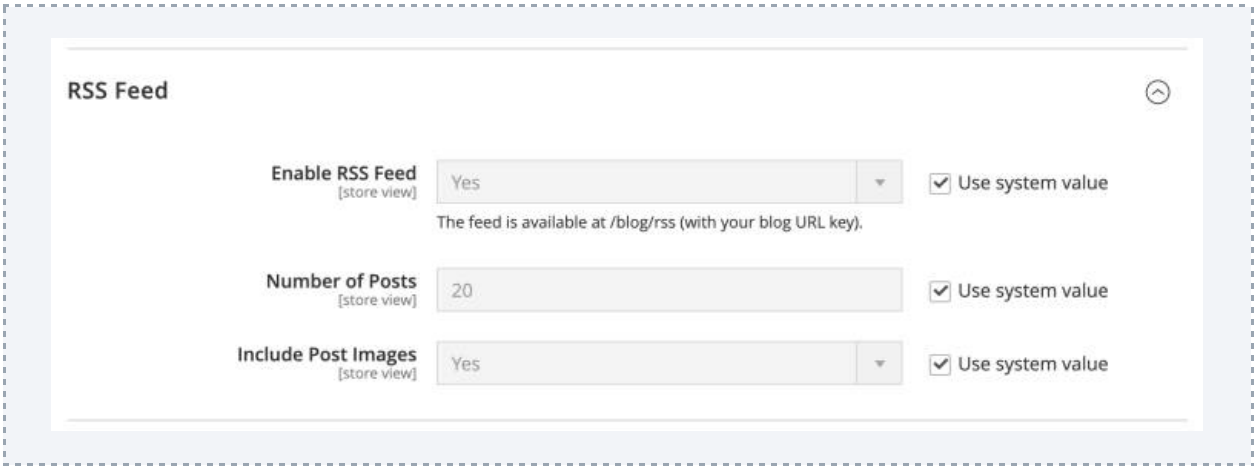

3.3 XML Sitemap

Field	Description
Include Posts	Adds published posts to the XML sitemap generated in **Marketing > Site Map**. Default: Yes
Posts: Priority	From 0.0 to 1.0. Default: 0.7
Posts: Change Frequency	How often search engines should expect post pages to change.

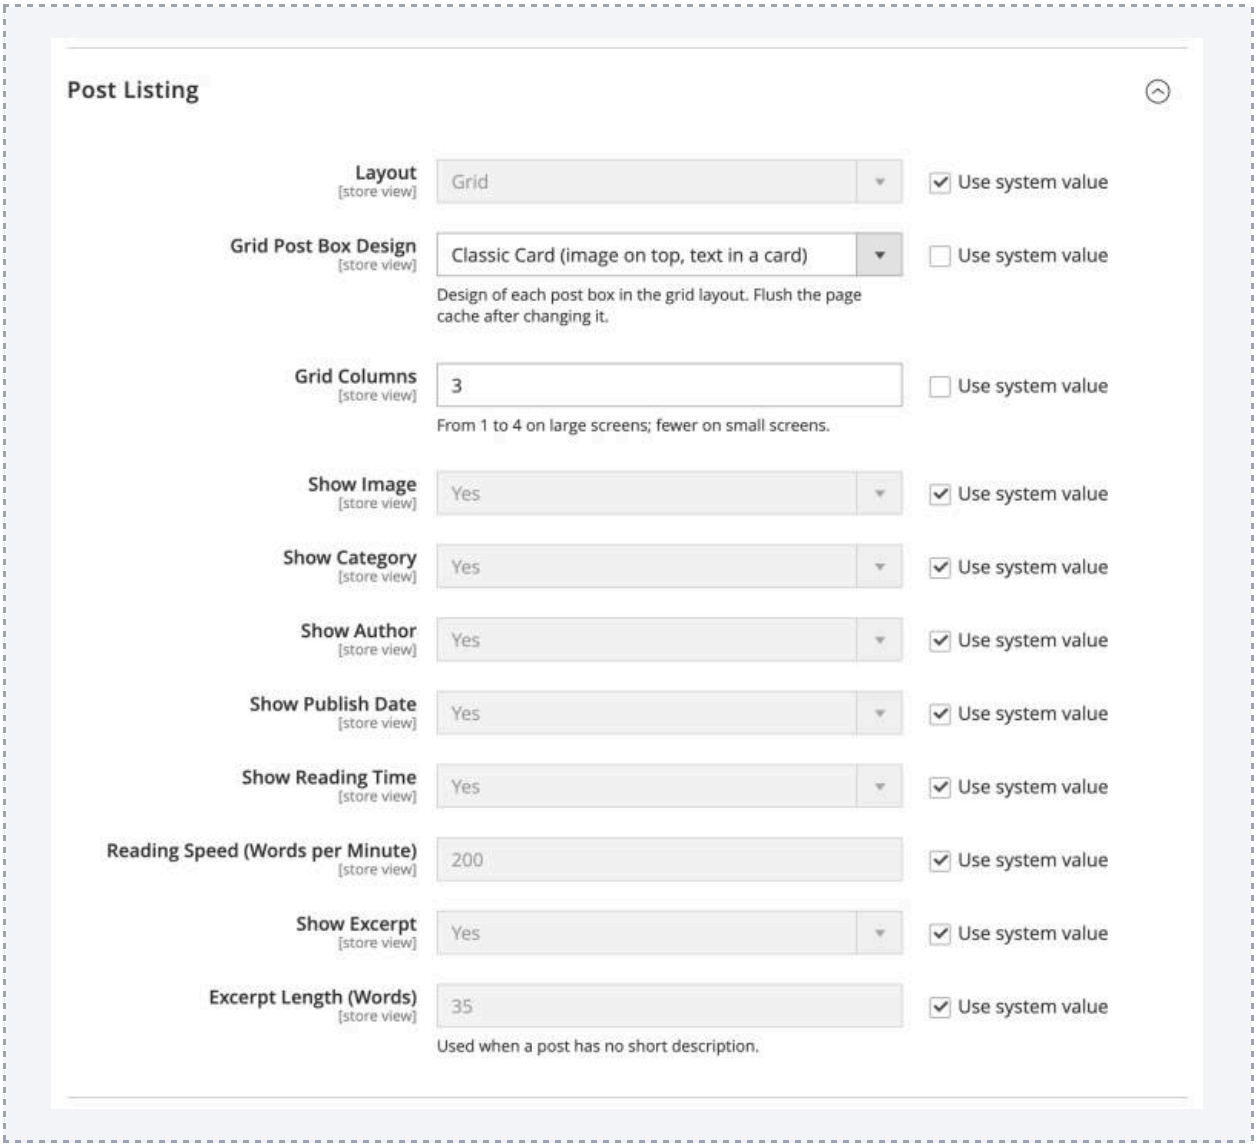

Field	Description
	Default: Weekly
Include Post Images	Adds the featured image of each post to the sitemap, so search engines can find it for image search. Default: Yes
Include Categories	Adds blog category pages to the XML sitemap. Default: Yes
Categories: Priority	From 0.0 to 1.0. Default: 0.5
Categories: Change Frequency	How often search engines should expect category pages to change. Default: Weekly
Include Authors	Adds author pages to the XML sitemap. Default: Yes
Authors: Priority	From 0.0 to 1.0. Default: 0.3
Authors: Change Frequency	How often search engines should expect author pages to change. Default: Monthly
Include Tags	Adds tag pages to the XML sitemap. Default: Yes
Tags: Priority	From 0.0 to 1.0. Default: 0.3
Tags: Change Frequency	How often search engines should expect tag pages to change. Default: Weekly

3.4 RSS Feed

Field	Description
Enable RSS Feed	The feed is available at /blog/rss (with your blog URL key). Default: Yes
Number of Posts	Number of latest posts included in the RSS feed. Default: 20
Include Post Images	Adds the featured image of each post to its feed entry. Default: Yes

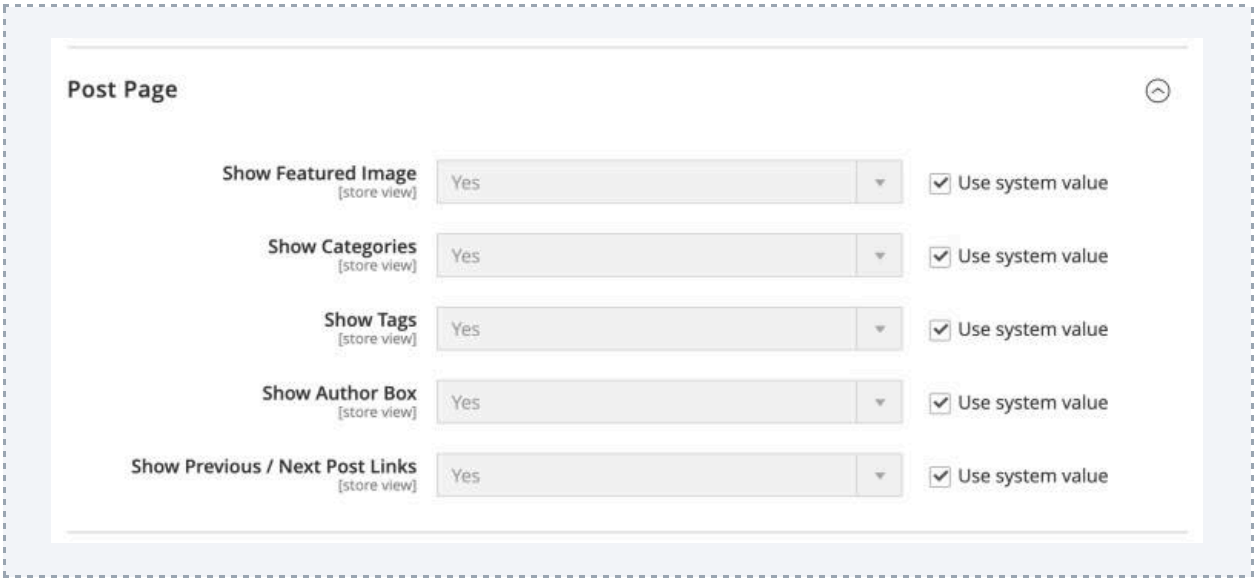

3.5 Post Listing

Field	Description
Layout	Layout of post lists (blog home, category, author, tag and search pages): **Grid** (cards in columns), **List** (image beside text) or **Magazine** (a large first post with a grid below). Default: Grid
Grid Post Box Design	Design of each post box in the grid layout. Flush the page cache after changing it. Default: Classic Card (image on top, text in a card)
Grid Columns	From 1 to 4 on large screens; fewer on small screens. Default: 3

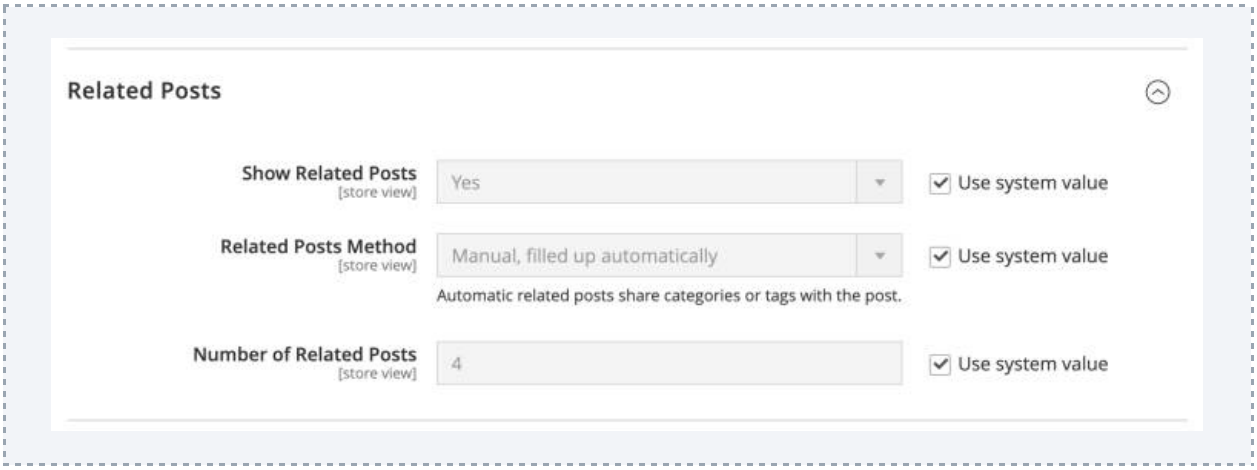

Field	Description
Show Image	Shows the post thumbnail (or featured image) in post lists. Default: Yes
Show Category	Shows the first category of each post as a label. Default: Yes
Show Author	Shows the author name and photo under each post. Default: Yes
Show Publish Date	Shows the publish date of each post. Default: Yes
Show Reading Time	Shows the estimated reading time, for example “4 min read”. Default: Yes
Reading Speed (Words per Minute)	Words per minute used to calculate the reading time. Default: 200
Show Excerpt	Shows a short text under the title: the post’s Short Description, or the beginning of its content. Default: Yes
Excerpt Length (Words)	Used when a post has no short description. Default: 35

3.6 Post Page

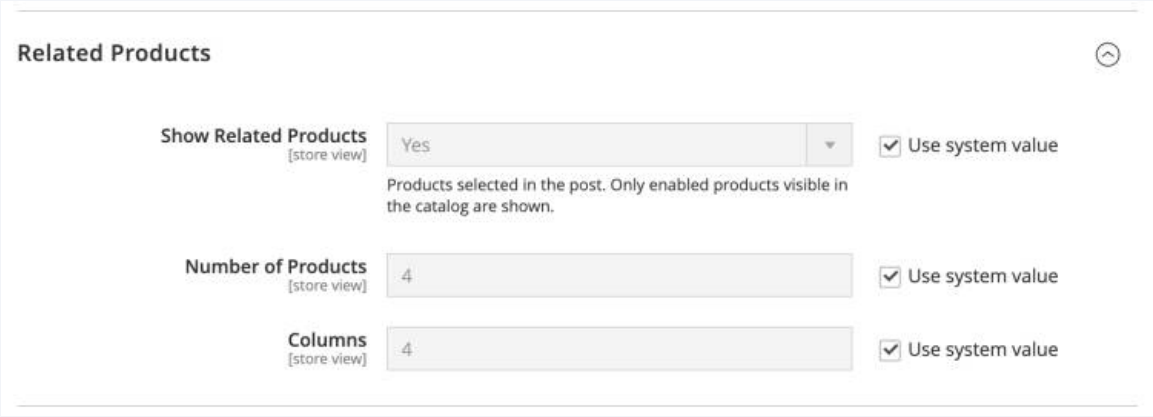

Field	Description
Show Featured Image	Shows the featured image at the top of the post page. Default: Yes
Show Categories	Shows the post's categories as labels above the title. Default: Yes
Show Tags	Shows the post's tags under the content. Default: Yes
Show Previous / Next Post Links	Shows links to the previous and next posts at the end of the post. Default: Yes
Show Author Box	Shows the "Written by" box with the author's photo, short bio and a link to all their posts. Default: Yes

3.7 Related Posts

Field	Description
Show Related Posts	Shows a “Related Posts” section under the post. Default: Yes
Related Posts Method	Automatic related posts share categories or tags with the post. Default: Manual, filled up automatically
Number of Related Posts	Maximum number of related posts shown. Default: 4

3.8 Related Products

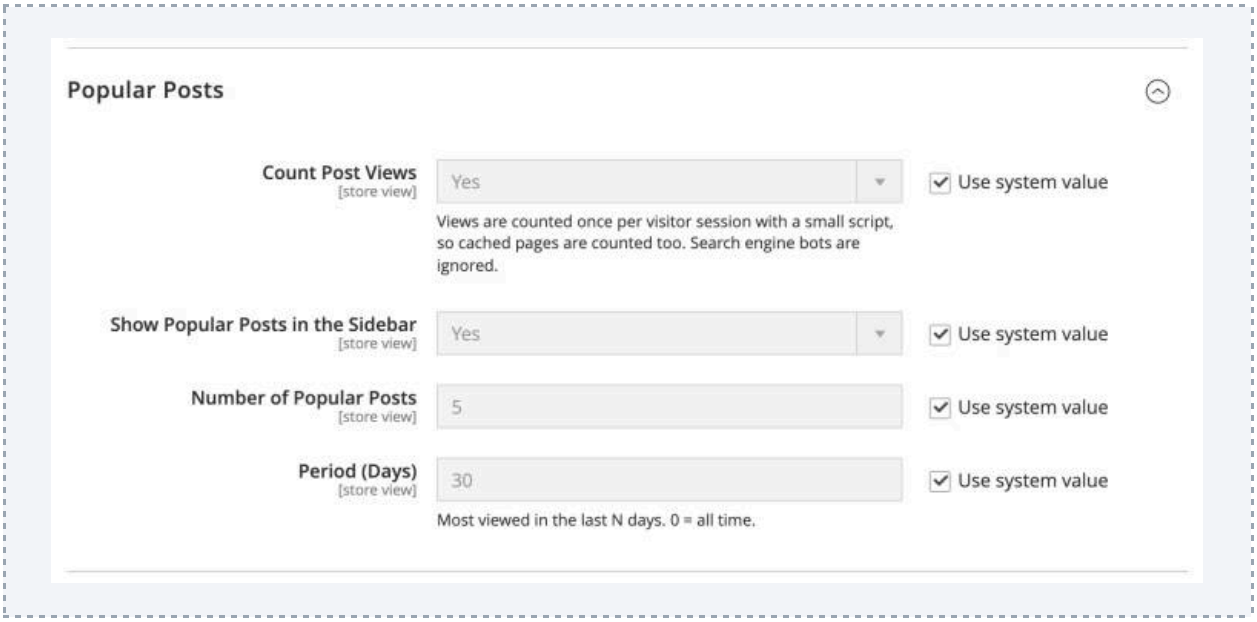

Field	Description
Show Related Products	Products selected in the post. Only enabled products visible in the catalog are shown. Default: Yes
Number of Products	Maximum number of related products shown on the post page. Default: 4
Columns	Number of product columns on large screens. Default: 4

3.9 Featured Posts

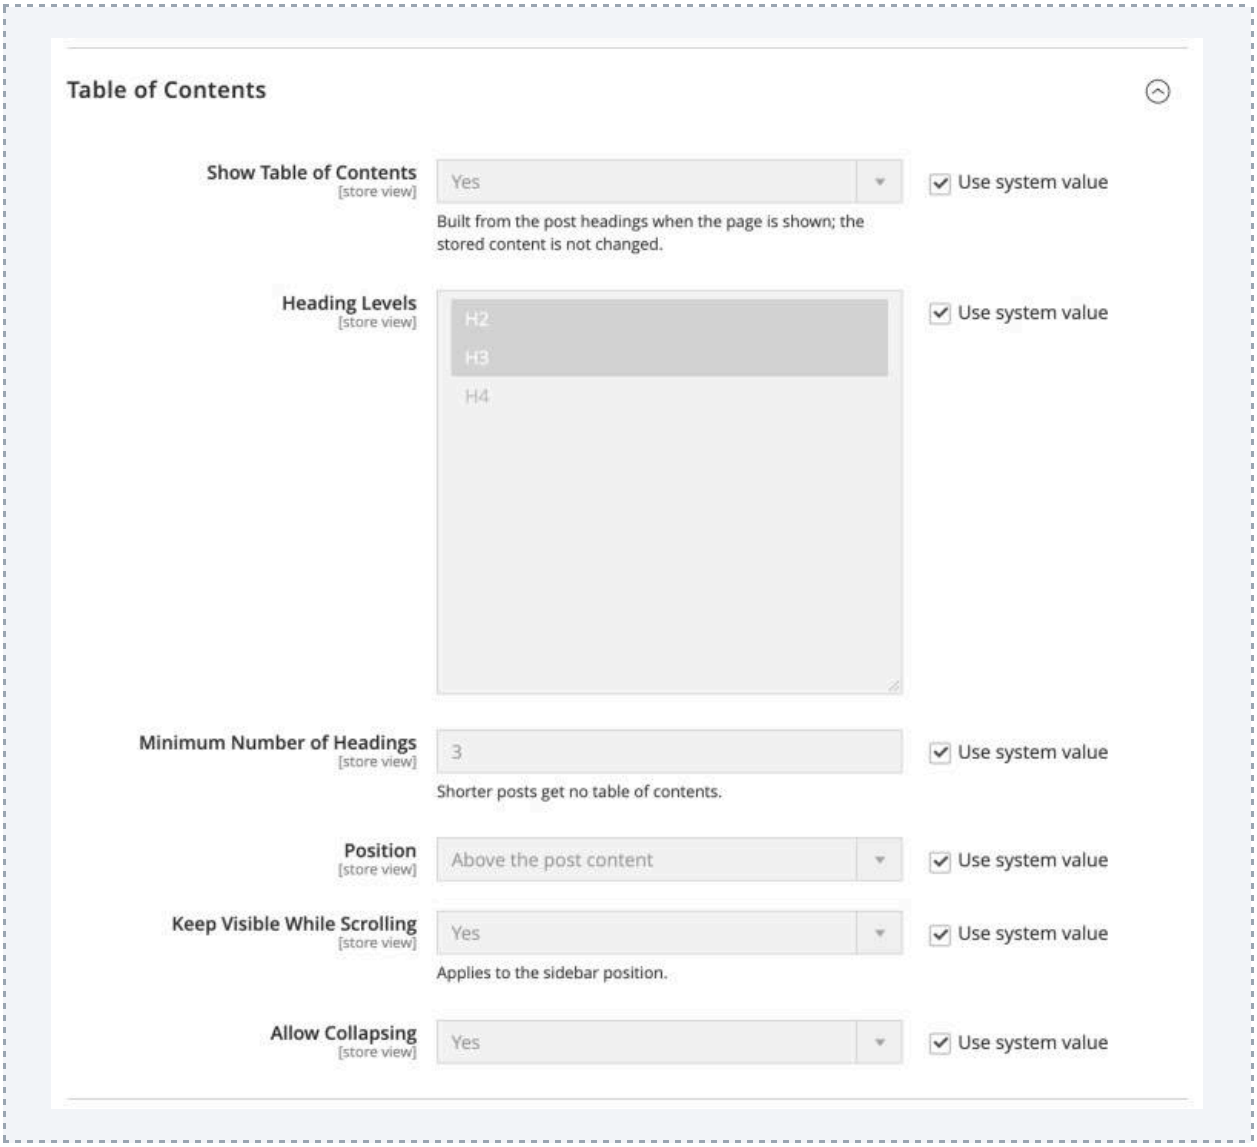

Field	Description
Show Featured Posts on the Blog Home	Shows posts marked as Featured in a large section at the top of the blog home. Default: Yes
Number of Featured Posts	Maximum number of featured posts shown on the blog home. Default: 3

3.10 Popular Posts

Field	Description
Count Post Views	Views are counted once per visitor session with a small script, so cached pages are counted too. Search engine bots are ignored. Default: Yes
Show Popular Posts in the Sidebar	Shows the most viewed posts in the blog sidebar. Default: Yes
Number of Popular Posts	Maximum number of popular posts shown in the sidebar. Default: 5
Period (Days)	Most viewed in the last N days. 0 = all time. Default: 30

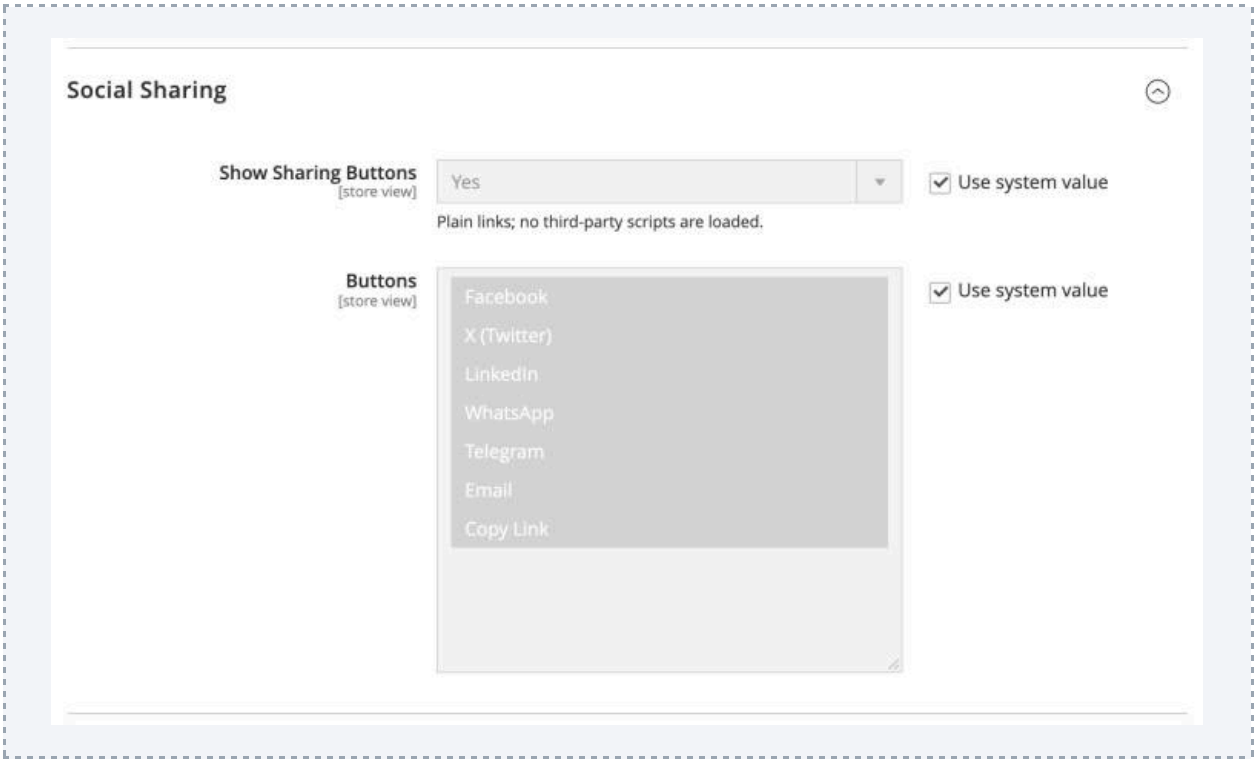

3.11 Table of Contents

Field	Description
Show Table of Contents	Built from the post headings when the page is shown; the stored content is not changed. Default: Yes
Heading Levels	Headings of the post content that are listed in the table of contents. Default: H2, H3
Minimum Number of Headings	Shorter posts get no table of contents. Default: 3
Position	Shows the table of contents above the post content or in the sidebar.

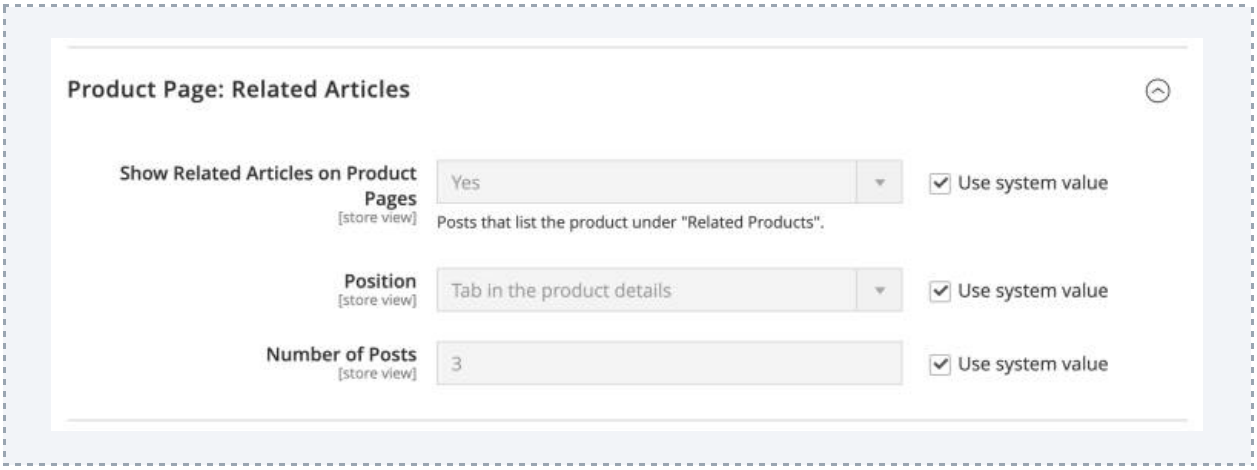

Field	Description
	Default: Above the post content
Keep Visible While Scrolling	Applies to the sidebar position. Default: Yes
Allow Collapsing	Lets customers open and close the table of contents. Default: Yes

3.12 Social Sharing

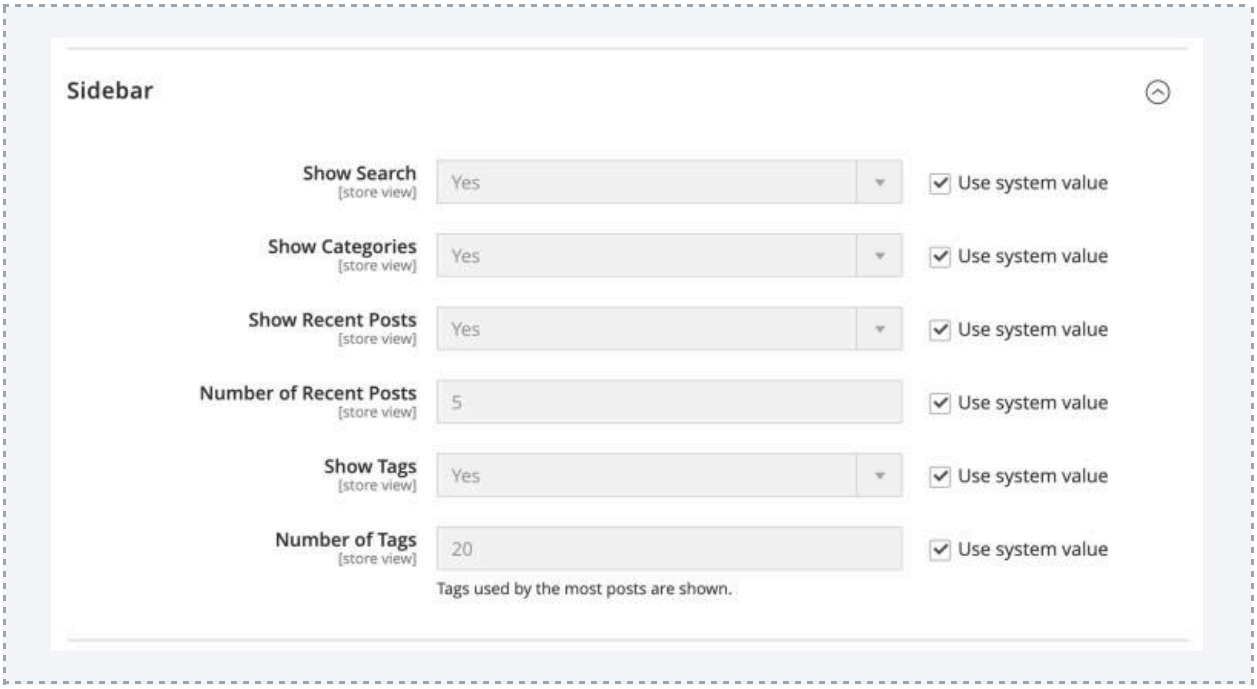

Field	Description
Show Sharing Buttons	Plain links; no third-party scripts are loaded. Default: Yes
Buttons	Sharing buttons shown on the post page. Hold Ctrl (Cmd on Mac) to select several. Default: Facebook, X (Twitter), LinkedIn, WhatsApp, Telegram, Email, Copy Link

3.13 Product Page: Related Articles

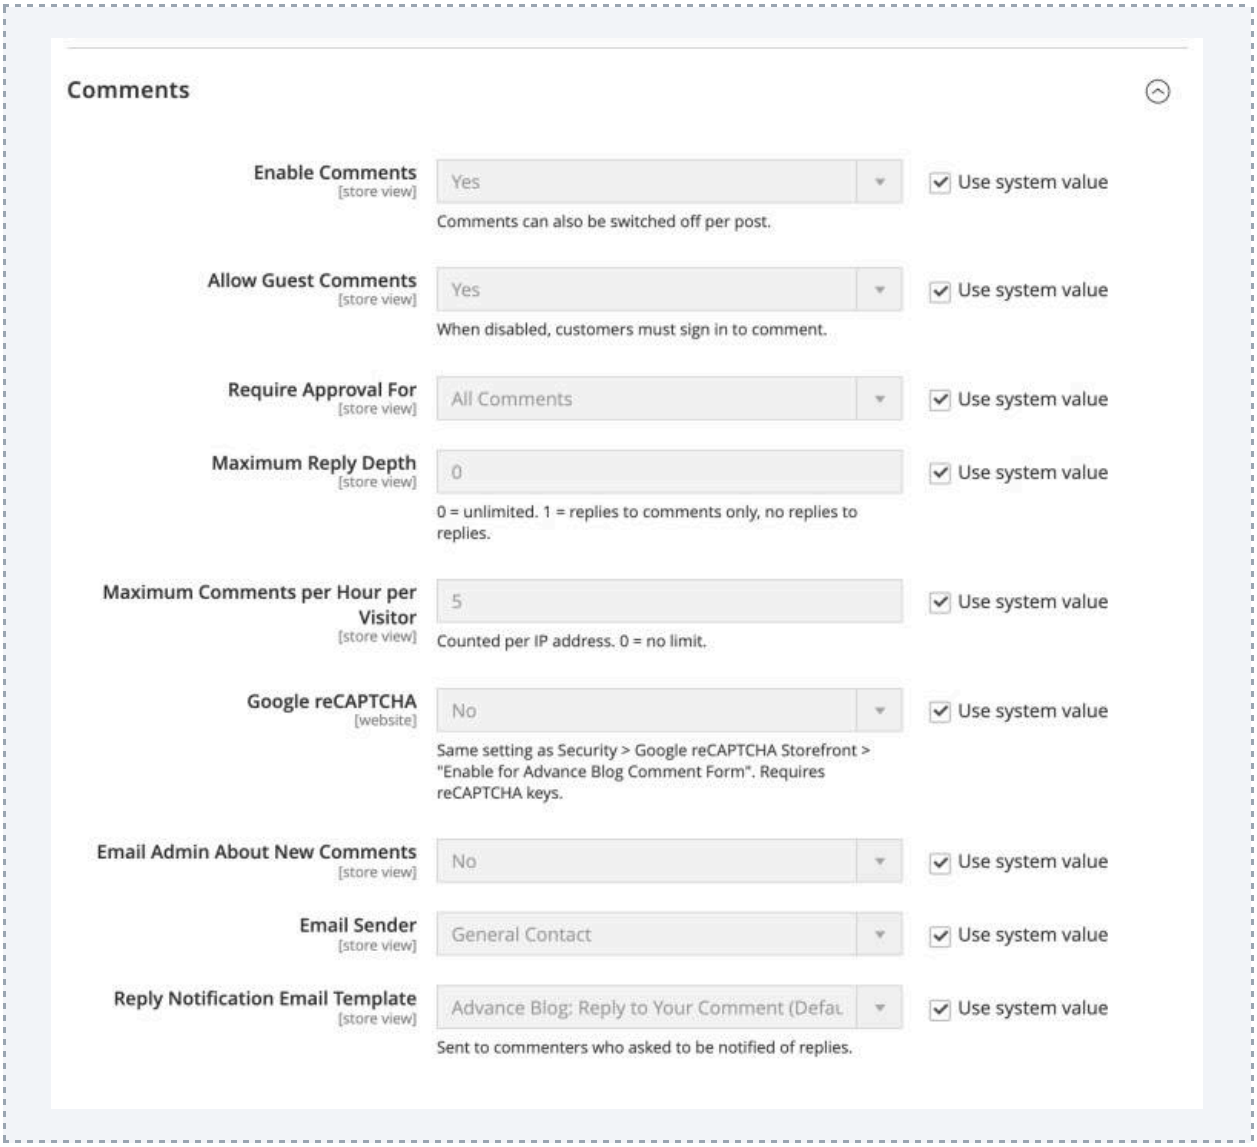

Field	Description
Show Related Articles on Product Pages	Posts that list the product under "Related Products". Default: Yes
Position	Shows the related articles as a tab in the product details, or below the product details. Default: Tab in the product details
Number of Posts	Maximum number of articles shown on a product page. Default: 3
Section Title	Below the product details only. Leave empty for "Related Articles". Default: (empty)

3.14 Sidebar

Field	Description
Show Search	Shows the blog search box in the sidebar. Default: Yes
Show Categories	Shows the blog category tree in the sidebar. Default: Yes
Show Recent Posts	Shows the latest posts, with thumbnails, in the sidebar. Default: Yes
Number of Recent Posts	Number of recent posts shown in the sidebar. Default: 5
Show Tags	Shows the tag cloud in the sidebar. Default: Yes
Number of Tags	Tags used by the most posts are shown. Default: 20

3.15 Comments

Field	Description
Enable Comments	Comments can also be switched off per post. Default: Yes
Allow Guest Comments	When disabled, customers must sign in to comment. Default: Yes
Require Approval For	Which new comments wait for approval in **Advance Blog > Comments** before they are shown: all comments, only guest comments, or none (published immediately). Default: All Comments

Field	Description
Maximum Reply Depth	0 = unlimited. 1 = replies to comments only, no replies to replies. Default: 0
Maximum Comments per Hour per Visitor	Counted per IP address. 0 = no limit. Default: 5
Google reCAPTCHA	Same setting as Security > Google reCAPTCHA Storefront > "Enable for Advance Blog Comment Form". Requires reCAPTCHA keys. Default: (empty)
Email Admin About New Comments	Sends an email to the address below when a new comment is posted. Default: No
Admin Email	Email address that receives new-comment notifications. Default: (empty)
Email Sender	Store email identity used as the sender of comment emails. Default: General Contact
New Comment Email Template (Admin)	Email template of the new-comment notification sent to the admin. Default: Default template
Reply Notification Email Template	Sent to commenters who asked to be notified of replies. Default: Default template

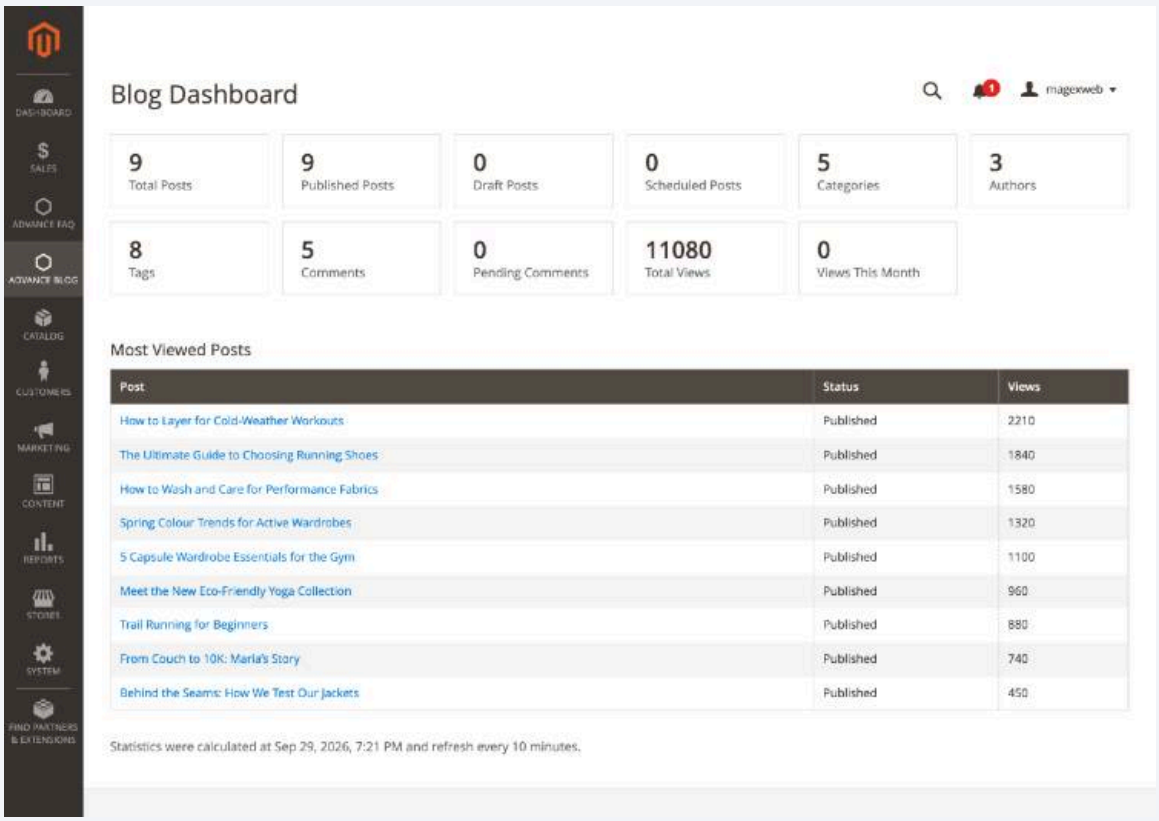

⚠ ***Note: To protect the comment form with Google reCAPTCHA, enter your reCAPTCHA keys in Stores > Configuration > Security > Google reCAPTCHA Storefront and choose a reCAPTCHA type for "Enable for Advance Blog Comment Form".***

4. Managing Blog Content

Everything is managed from the **Advance Blog** menu in the Magento Admin: Dashboard, Posts, Categories, Authors, Tags, Comments and a link to the configuration.

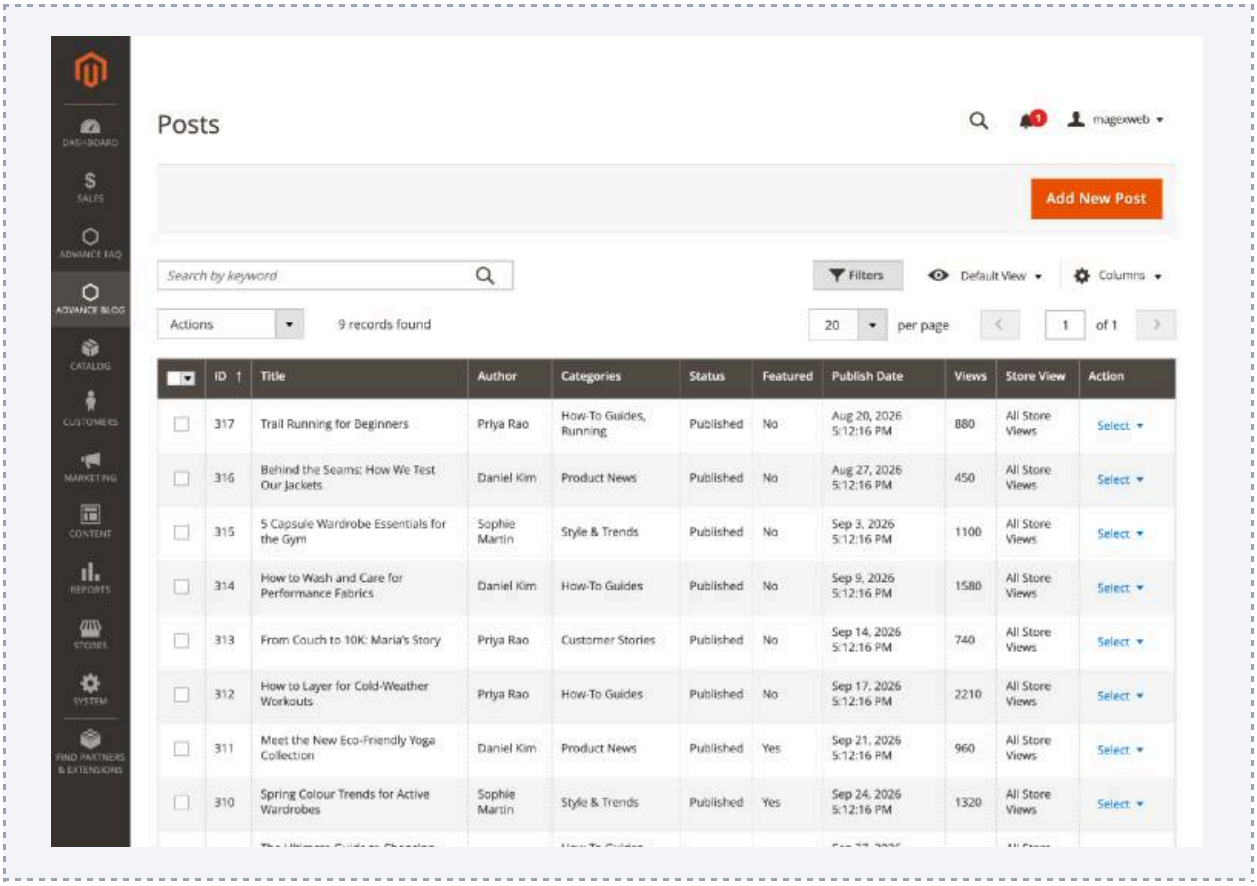

4.1 Dashboard

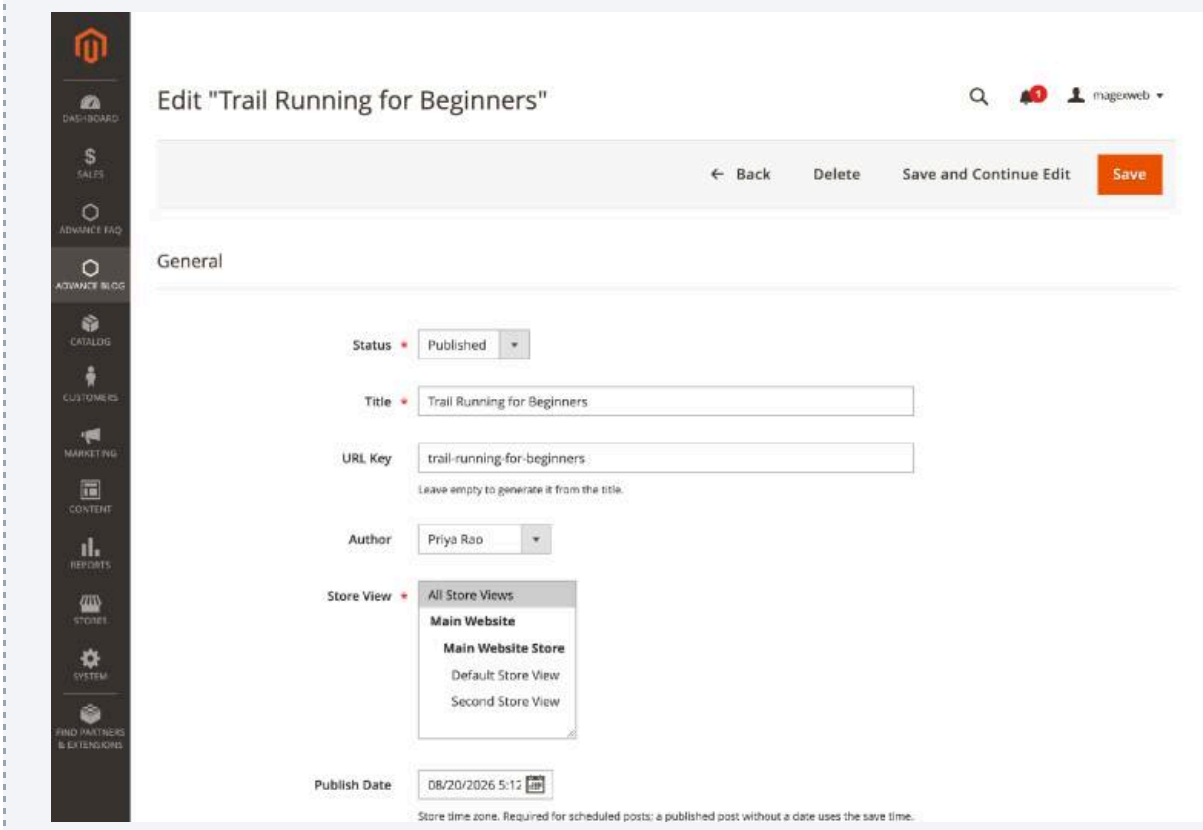

The dashboard shows the number of posts (published, draft and scheduled), categories, authors, tags and comments, the comments waiting for approval, the total views and the most viewed posts.

4.2 Posts

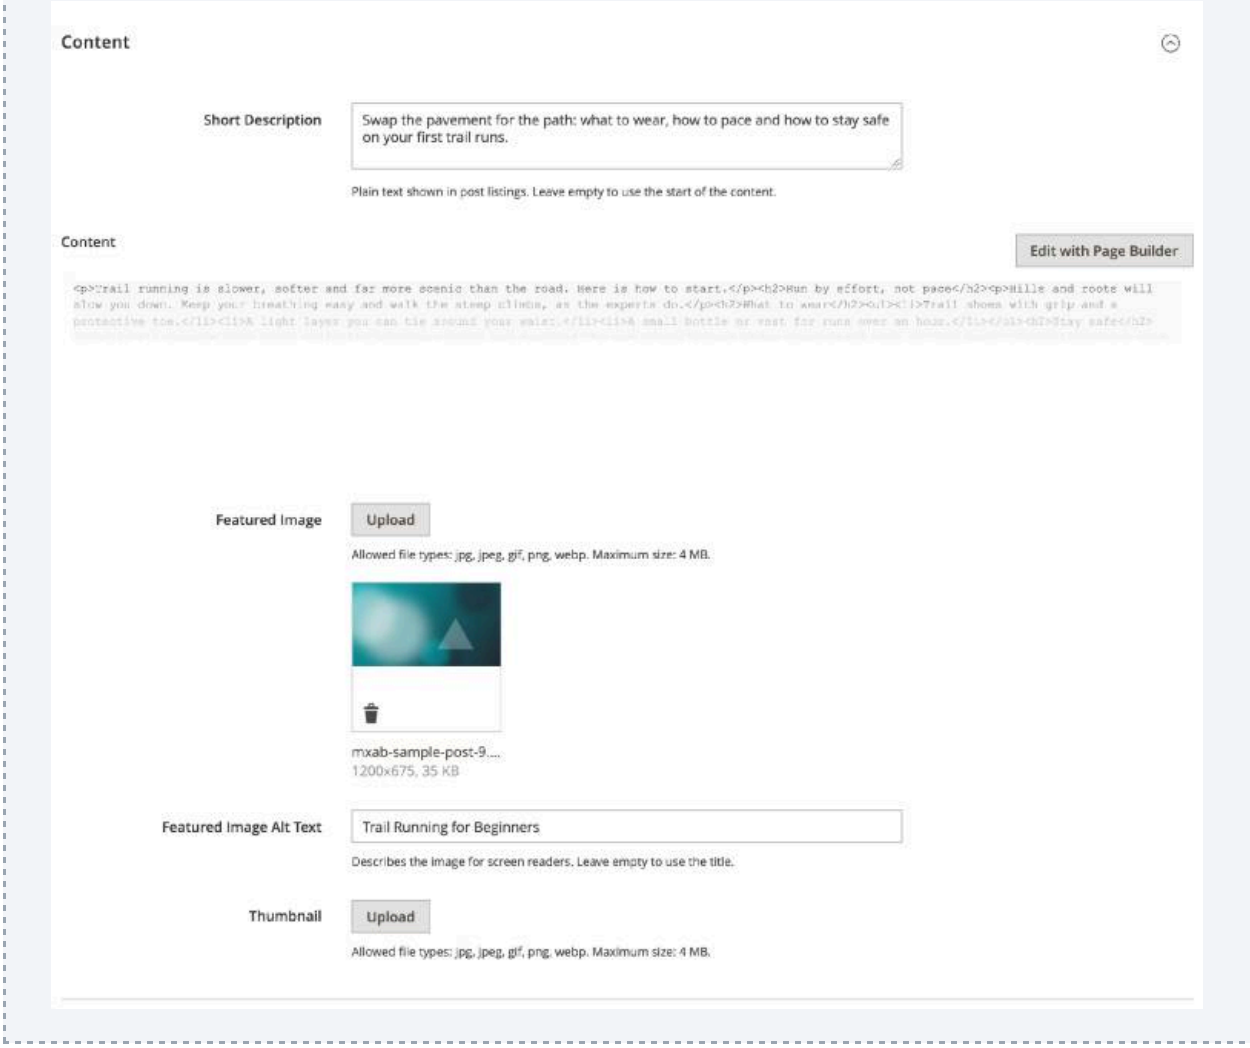

Go to **Advance Blog > Posts**. The grid supports keyword search, filters (including Store View and Category), column selection, mass actions (Publish, Disable, Feature, Unfeature, Delete) and a Duplicate action for each post. Click **Add New Post** to write a post.

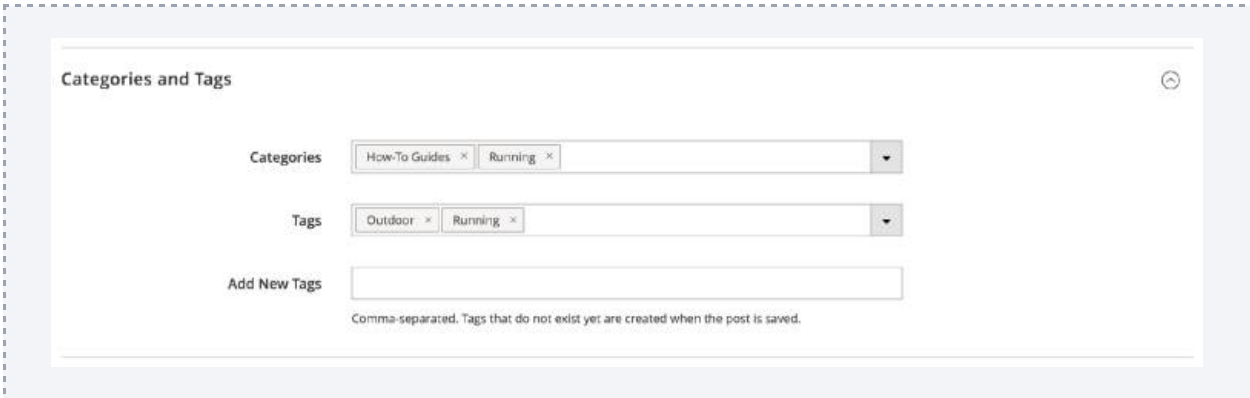

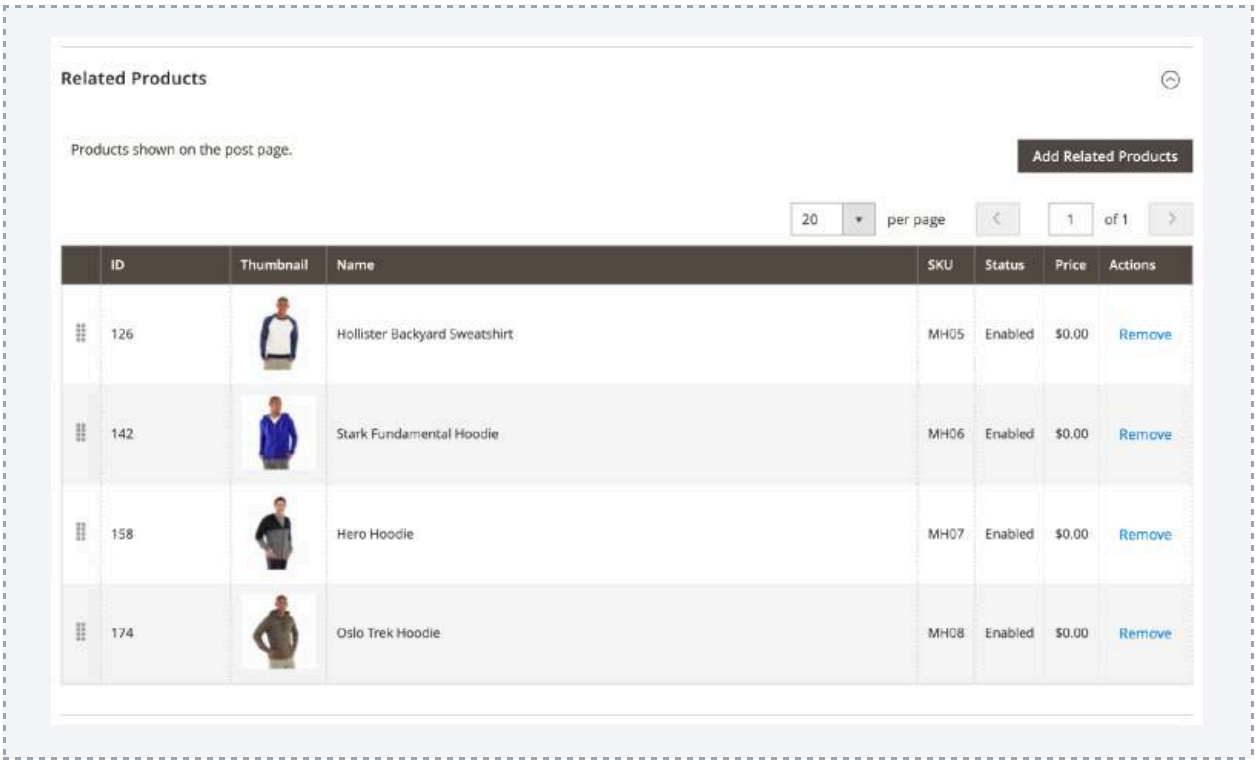

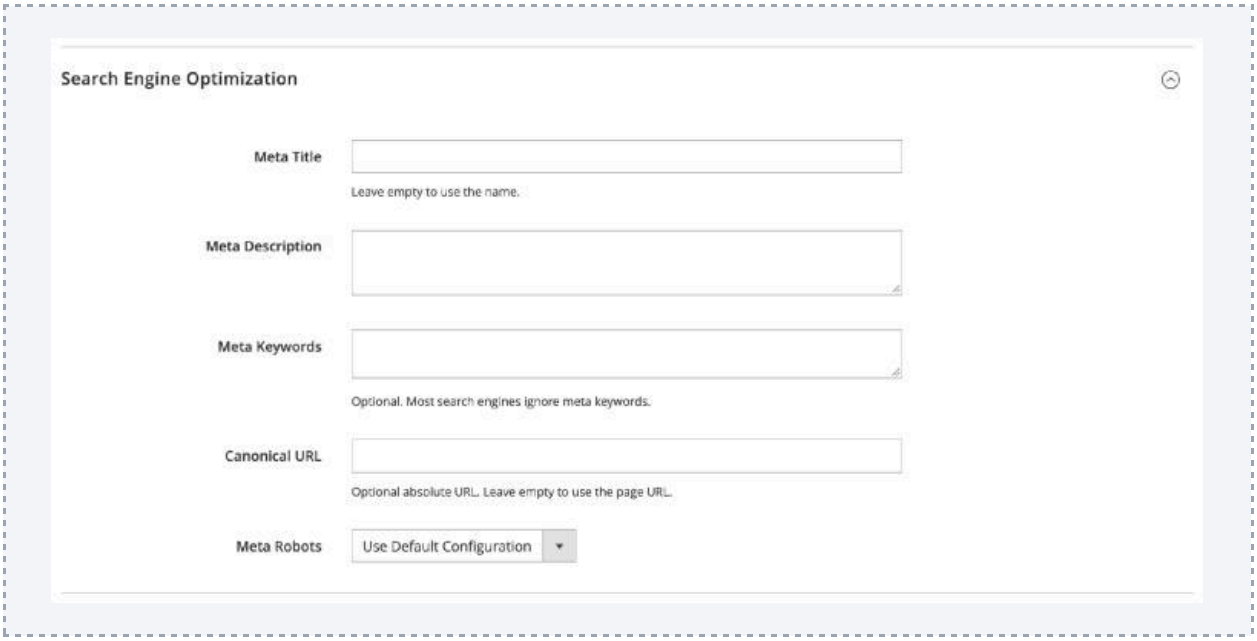

Section	Fields
General	Status (Draft, Published, Scheduled, Disabled), Title, URL Key, Author, Store View, Publish Date, Featured, Allow Comments, Sort Order
Content	Short Description (shown in post lists), Content (WYSIWYG editor or Page Builder), Featured Image and its Alt Text, Thumbnail (optional image for post lists)
Categories and Tags	Categories, Tags, and Add New Tags (enter new tag names separated by commas; they are created when you save)
Related Products	Products shown under the post. Click Add Related Products, select products and drag rows to change their order.
Related Posts	Posts shown under the post when the Related Posts Method is set to manual selection.
Search Engine Optimization	Meta Title, Meta Description, Meta Keywords, Canonical URL, Meta Robots

⚠ Note: To schedule a post, set Status to Scheduled and choose a future Publish Date. Magento cron publishes the post at that time.

Content
Short Description
Swap the pavement for the path: what to wear, how to pace and how to stay safe on your first trail runs.
Plain text shown in post listings. Leave empty to use the start of the content.
Content

Search Engine Optimization
Meta Title
Leave empty to use the name.
Meta Description
Meta Keywords
Optional. Most search engines ignore meta keywords.
Canonical URL
Optional absolute URL. Leave empty to use the page URL.
Meta Robots
Use Default Configuration

4.3 Categories

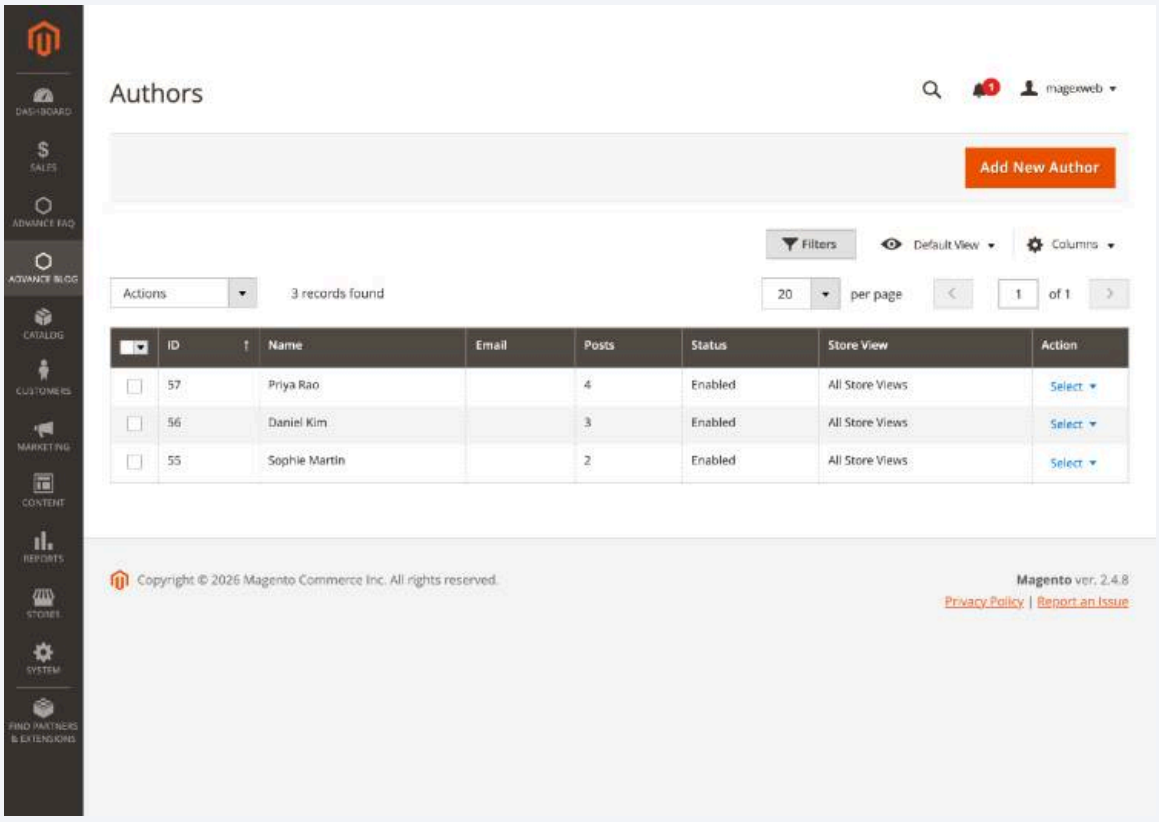

Go to **Advance Blog > Categories**. Categories can be nested: choose a Parent Category to create a subcategory. Each category has a name, URL key, description, banner image, sort order, store views and SEO fields.

4.5 Tags

Go to **Advance Blog > Tags** to add, rename or delete tags. Tags can also be created while editing a post with the **Add New Tags** field. Every tag has its own page listing its posts.

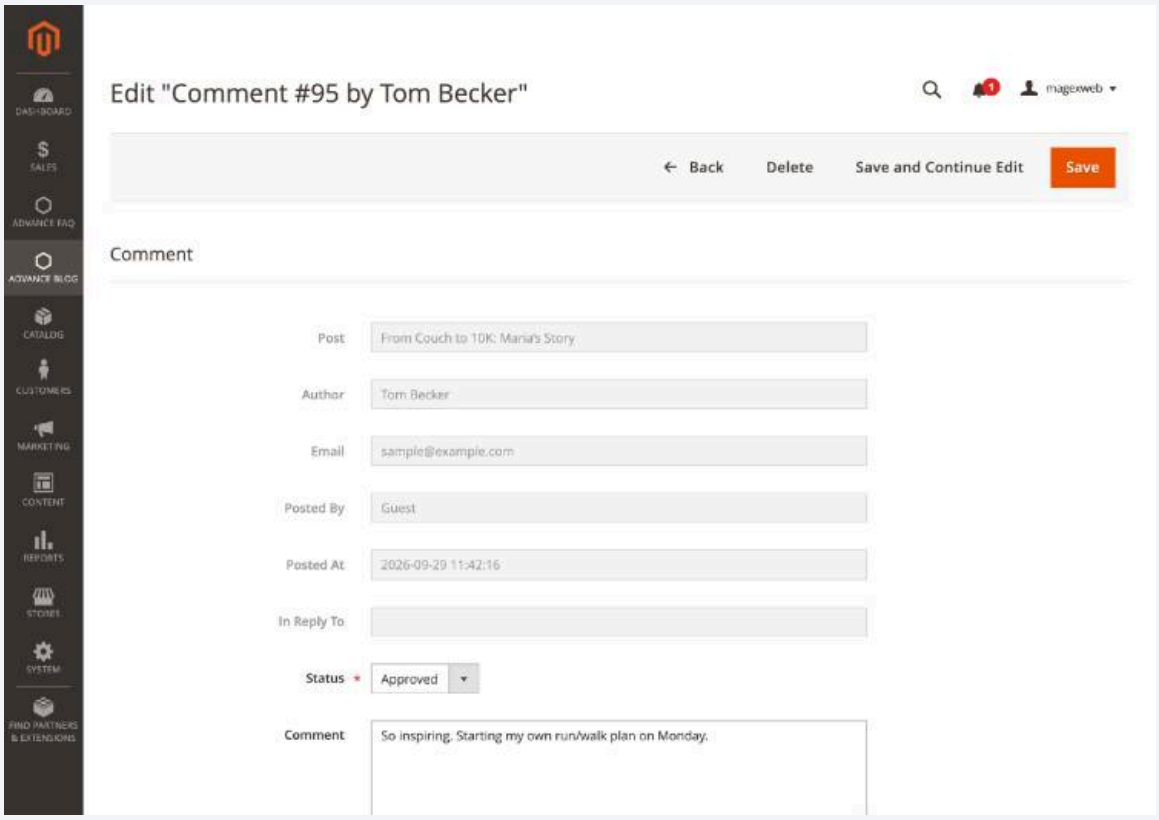

4.6 Comments

Go to **Advance Blog > Comments** to moderate comments. Filter by status, then approve, reject, mark as spam or delete comments, one by one or with mass actions.

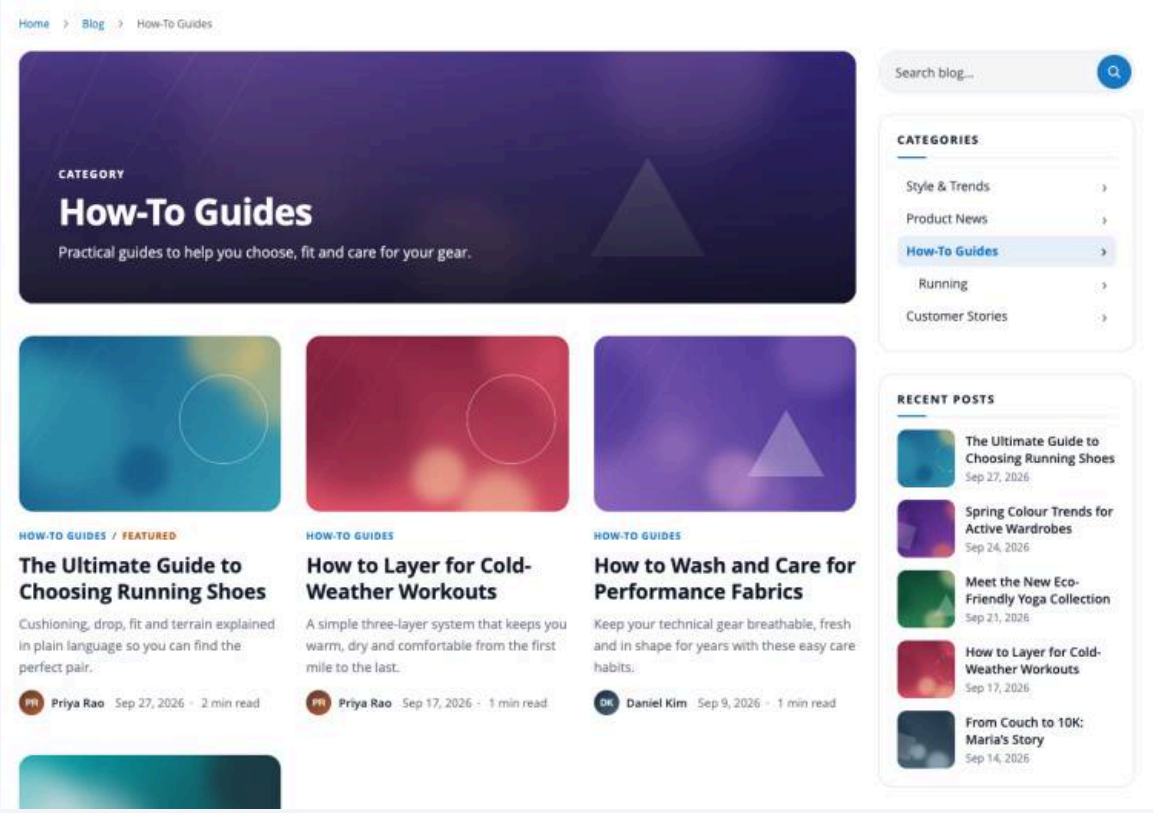

Open a comment to change its status or to reply as the store. Your reply is published under the comment with a **Staff** badge, and the customer is notified by email if they asked to be.

So inspiring. Starting my own run/walk plan on Monday.

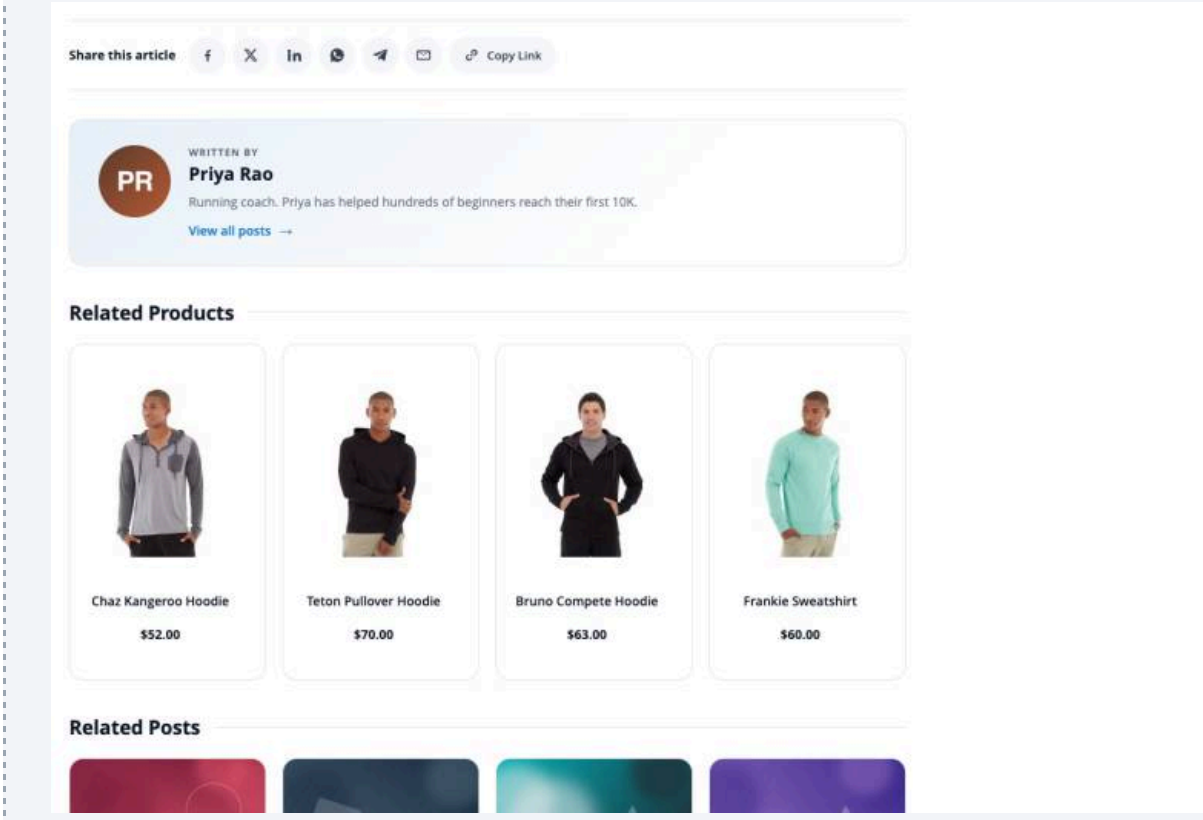

5. Storefront Behaviour

Once enabled and configured, the blog behaves as follows for shoppers:

- The blog is available at /blog (or the Blog URL Key you configured), with a link in the top menu.
- Posts are shown in the layout chosen in Post Listing, with pagination.
- Only posts that are published, visible in the current store view and whose publish date has passed are shown.
- Category, author and tag pages list their posts; the category page shows the category banner and description.
- The sidebar shows the search box, categories, recent and popular posts, and tags.
- Comments are shown under the post once approved; replies appear under the comment they answer.
- Products linked to a post appear under the post, and the post appears as a related article on those product pages.

6. Widgets and Page Builder

6.1 CMS Widgets

Add blog content to any CMS page, block or widget position in **Content > Widgets**, or with **Insert Widget** in the editor:

Widget	Description
Advance Blog - Latest Posts	The newest posts, optionally from one category, in a grid or list.
Advance Blog - Featured Posts	Posts marked as Featured.
Advance Blog - Popular Posts	The most viewed posts.
Advance Blog - Related Posts	Posts related to a post you choose.
Advance Blog - Related Products	Products linked to a post you choose.
Advance Blog - Categories	The blog category tree.
Advance Blog - Tags	The tag cloud.
Advance Blog - Search	A blog search box.

6.2 Page Builder

In Page Builder, drag the **Blog Posts** element from the **Add Content** group onto the page. Choose which posts to show (Latest, Featured or Popular), how many, and the layout. The element shows a live preview while you edit.

7. SEO and URLs

Page	URL
Blog home	/blog
Post	/blog/post-url-key
Category	/blog/category/category-url-key
Author	/blog/author/author-url-key
Tag	/blog/tag/tag-url-key
Search	/blog/search?q=keyword
RSS feed	/blog/rss

- The blog URL key and an optional URL suffix (for example .html) are set in **General Configuration**.
- When you change a URL key, the old URL redirects (301) to the new one if Create Permanent Redirect for Old URLs is enabled.
- After changing the blog URL key or suffix, rebuild all blog URLs with: php bin/magento magexweb:advanceblog:urls:regenerate
- Every post, category, author and tag has its own meta title, meta description, meta robots and canonical URL.
- Structured data (JSON-LD) for BlogPosting, Blog, Person and BreadcrumbList, plus Open Graph and Twitter / X card tags, are added automatically.
- Posts, categories, authors and tags are added to the XML sitemap generated in Marketing > Site Map.

8. REST API

Storefront endpoints are public and return only published content visible in the store view of the request (/rest/<store_code>/V1/...). Admin endpoints need an admin or integration token with the matching Advance Blog permission.

Endpoint	Description
GET /V1/advanceblog/posts, /posts/:postId	Published posts (public)
GET /V1/advanceblog/categories, /authors, /tags	Visible categories, authors and tags (public)
/V1/advanceblog/admin/posts	GET, POST, PUT, DELETE posts (admin)
/V1/advanceblog/admin/categories, /authors, /tags	GET, POST, PUT, DELETE categories, authors and tags (admin)
/V1/advanceblog/admin/comments	GET, PUT (moderate) and DELETE comments (admin)

9. Uninstallation

- Optional: php bin/magento magexweb:advanceblog:sample-data:remove
- php bin/magento module:disable Magexweb_Advanceblog
- Remove the module files (composer remove magexweb/advanceblog, or delete app/code/Magexweb/Advanceblog)
- php bin/magento setup:upgrade && php bin/magento cache:flush

> ⚠ ***Note: Disabling or removing the module keeps your blog content in the database, so you can reinstall it later without losing anything. To delete the content permanently, drop the magexweb_advanceblog_* tables after removing the module.***

10. Troubleshooting & FAQ

The blog page shows “404 Not Found”. What should I check?

Check that Enable Blog is set to Yes for the store view, then run php bin/magento magexweb:advanceblog:urls:regenerate and flush the cache.

Why does my new post not appear on the storefront?

Check that its Status is Published, its Publish Date is not in the future and it is assigned to the current store view (or All Store Views). If you use Varnish or another external cache, flush it.

Why are scheduled posts not published?

Scheduled posts are published by Magento cron. Make sure the Magento cron jobs are running.

Why are customer comments not visible?

By default new comments wait for approval. Approve them in Advance Blog > Comments, or change Require Approval For in the Comments configuration.

Can I use a different URL than /blog?

Yes. Change Blog URL Key (and optionally URL Suffix) in General Configuration, then rebuild the blog URLs with the urls:regenerate command.

Can I show different posts in different store views?

Yes. Choose the store views of each post, category, author and tag. A URL key only has to be unique within a store view.

The design did not change after an update. Why?

In production mode, run php bin/magento setup:static-content:deploy -f and flush the cache.

11. Support

Item	Detail
